

Reducing packaging

- it's the right thing to do!

Wavin UK: Building Healthy Sustainable Environments

Sustainability – it's all connected

At Wavin, we think of sustainability as a journey rather than a destination. We are fully committed to that journey but recognise that it requires investment and thinking ahead combined with action, challenge and change.

As part of our commitment to reducing our carbon footprint, we have been looking at how we use packaging for our products, whilst still getting them to you safely and securely:

We have:

- ✓ Created a committed focus group across all UK sites looking to make all our packaging more sustainable
- ✓ Committed to using 30% Recycled plastic content in line with the HM Treasury Plastic packaging tax by 2022
- ✓ Supply chain assurance from our packaging partners of their sustainability commitments
- ✓ A commitment to removing the use of unnecessary waste

We are:

- ✓ Researching continuously into new and innovative packaging solutions
- ✓ Looking at where our packaging can be reusable
- ✓ Looking at packaging materials and sizing for efficiency and carbon reduction

If you would like to know more about how we are looking to reduce our packaging please speak to your key account manager.
